NEW!

BioStream BP120

NEW!

The new BP120 is the largest model in the BioStream Pump line. As with all BioStream pumps the BP120 allows for a broad operating range that makes it ideal for bathing, transferring, grading and harvesting of fish up to 7 Kg. The BP120 is hydraulically driven which gives it the versatility needed for operating in a wide range of applications from indoor RAS to Well Boat Decks. The BP120 makes handling large fish a simple and economical option for all types of fish species.

Serving the Aquaculture Industry since 1975

Applications

Top: BP120 being used to transfer and count large Trout 3Kg-4Kg at a cage pen operation in Scotland. The BP120 and AquaScan CSF counter are packaged together on a specially designed skid to facilitate easy loading and unloading of the system from boats and barges.

Intel/ Outlet Size	Main Pump Drive	Fish Pumping cap.	Pump Output Max.	Maximum Head	Maximum Distance	Average Fish Size
12 in (305mm)	75 HP	150 t/h	800-4800 gpm	8 m	1500m	7 kg

Bottom: BP120 shown transferring Atlanta Salmon to grader at a RAS facility in British Columbia. All transfer lines, suction devises, and misc. items used in the fish handling system were designed and built by Aqua-Life.
